

Transportation Management for shippers

Multi-modal, global transportation management

As a shipper, you are responsible for complex, global transportation networks and managing tremendous amounts of inventory daily. No matter the industry, there is constant pressure to reduce supply chain costs and stay current on the ever-evolving global trade regulatory landscape with its complex customs and legal requirements. And every shipment needs to be on-time while meeting the highest customer service standards.

Infios understands the challenges that shippers face. Developed by supply chain professionals with the way you work in mind, Infios Transportation Management (TM) for shippers provides a single platform solution to manage even your most complex global transportation requirements. Infios Transportation Management delivers comprehensive international capabilities, supporting multimodal, multi-leg shipments with ease.

Door-to-door multimodal transportation management

With Infios TM, you can manage all modes of transport, including parcel, LTL, TL, ocean, intermodal, air, and rail. The solution empowers control tower visibility, decision support, and powerful business intelligence allowing you to easily identify relationships, trends, and exceptions. Leverage the Infios TM closed loop system to efficiently manage your entire transportation network and freight spend, from small parcel to multi-container ocean shipments.

“Infios Transportation Management has greatly helped us manage and consolidate these LTL shipments, and has also given us the visibility to see where we did or didn’t save money on our loads.”

Wanda Duvel

Director of Logistics, Hibbett Sports

Highlights

Single-platform global transportation management

Procure, plan, optimize, execute and settle shipments

Complex omni-modal optimization

Control tower visibility and decision support

Cloud-based and highly scalable

Powerful business intelligence

Multi-everything

Infios TM enables you to support complex multimode/leg/pickup/drop/customer shipments. Each leg of a multi-leg shipment can be optimized and rated separately to maximize service and minimize cost. Multi-leg shipments that will be repeated can be saved as a template and re-rated when necessary. All costs of complex multi-leg shipments are considered and recorded so that total cost is available for analysis.

Global transportation management

In today's world of globalization, shipping all over the world is a critical component of many organizations' transportation strategies. Infios TM provides you with comprehensive international capabilities to efficiently manage your global shipping requirements. Shipment templates allow you to complete repetitive, but necessary, steps much faster. Users in your organization can access information from anywhere in the world based on their localized terms, languages, currencies and units of measure according to their specific location and requirements. With Infios TM, you can directly file electronic export information (EEI) via the automated export system (AES) and submit importer security filings (ISF) to comply with global trade regulations. And, using the document template management tool, you can easily generate all necessary import and export documents with the added confidence that all requirements are being met with every shipment.

New era of simplicity and data awareness

Your transportation management software should empower your business, not hold you back with complicated workflows and multiple clicks just to get to your crucial information. The Infios experience is more than just a user interface—it takes into account the complexities and realities that you face every day, and keeps your most critical and frequent functions front and center at all times by displaying all relevant information on one intuitive home screen. The latest user experience combines customer feedback with our decades of industry expertise to reimagine your modern transportation management.

Configurability in the cloud

Your transportation processes are as unique as your business and continually evolving. Infios TM provides you with the advantages of cloud-based software, while also allowing for the customization that your business requires. Customization can be done at various levels, with configurable workflows, integrations in and out of the system, and documentation. Additionally, Infios TM open architecture enables you to easily integrate transportation planning, the execution and settlement with external systems, including most accounting packages, enterprise resource planning (ERP), warehouse management systems (WMS), and proprietary solutions.
