

Infios Transportation Management System for 3PLs

Comprehensive Transportation Management for third-party logistics providers (3PL)

As a 3PL professional, you must deliver a range of services to your clients, negotiate rates and select the best carriers. You also need to optimize inbound and outbound global shipments simultaneously, all while quickly onboarding new clients.

Infios Transportation Management System (TMS) for 3PLs offers a single-platform solution designed to meet the unique needs of third-party logistics professionals, helping you manage even the most complex global transportation requirements. The system supports business growth, simplifies client onboarding and enables you to expand the range of services offered to clients.

Onboard new clients rapidly

Infios TMS is designed to support 3PLs by streamlining the process of rapidly onboarding new clients. Infios's inherent hierarchy model enables 3PL providers to set up carriers, contracts and configurations, which can be leveraged across multiple customers. Template models can be set up that can be established as a foundation for setting up new clients, reducing data entry tasks and minimizing errors. This allows 3PL providers to onboard new customers quickly, with little to no adjustments needed within the application.

Key benefits

Reduce costs, drive growth and save time

Support for all modes of transport

Manage carrier and rate data in one system

Sell, implement and onboard new clients quickly

Procure optimal rates from carriers

Manage and track international shipments

Identify relationships, trends and exceptions with powerful business intelligence
