

Transportation Management for food & beverage

The TMS that sets the table

Food and beverage shippers face unique challenges. Consumer expectations run high and delivery must be guaranteed within exacting parameters. You also need to navigate seasonality, manage perishable inventory, stay up to date with ever changing food safety and compliance regulations, and find capacity with very specific equipment needs. Infios's Transportation Management (TM) platform is designed to meet these demands and to do so with the speed and ease of use that makes you competitive for the short and long haul.

From frozen meats to fruit and vegetables, cold beer to fine whiskeys, many of the world's most celebrated brands trust Infios to empower their logistics. Our cloud-based TMS combines power and usability to support food and beverage shippers every day with exceptional control tower visibility, optimization across all transportation modes (including your own private fleet if applicable), and access to capacity at competitive market rates. The TMS was designed to align to your industry with built-in best-practice workflows developed over decades of experience. This streamlines the onboarding process as well as simplifying functionality so even new employees can use Infios TM effectively.

"We are extremely pleased with the rapid implementation and flexible support that Infios has provided us. This system and process will make integration of future acquisitions much easier."

Vice President of Logistics
Private Label Food Manufacturer

Highlights

Proven track record with food and beverage shippers of all sizes

Fast implementation and ease-of-use for rapid ROI

Consistent regulatory compliance for lower risk

Interfaces directly with financial, ERP, and other systems

With Infios, you gain:

- Omni-modal coverage with global reach
- True, end-to-end optimization
- Prioritized exception management
- Advanced, accessible business intelligence
- Built-in carrier management

Control tower visibility

Managing and tracking end-to-end movement of perishable and non-perishable goods requires full visibility throughout the process. This includes inbound shipments from suppliers all the way to end customer delivery. Infios provides this broad view across multiple providers and company divisions throughout even complex supply chains. And the system's granular track-and-trace capabilities enable managing the cold chain for goods in transit, ensuring shipment integrity.

One TMS for all modes

The Infios platform lets you manage transportation across all modes (parcel, less-than-truckload (LTL), truckload, air, ocean, rail, and intermodal). This capability allows you to execute simple or complex moves across multi-pick, multi-drop, and multi-leg shipments. The solution supports cost allocation across multiple customers and carriers, ensuring you have an accurate perspective of your budget and profitability. With all modes in one platform, you can optimize across your entire network, with the potential of combining multiple parcel packages into one LTL shipment.

Access to additional capacity

Infios helps you find the equipment you need at competitive rates by providing access to market-driven sourcing and spot buying. In addition to private and public bid boards, the system includes tools to identify previous carriers and lane history, while also finding carriers for backhauls.

Best-practice workflows

To gain the full value from your TMS it has to be easy to use. Built-in workflows make it simple for you to efficiently execute daily tasks. You can also benchmark the data that is embedded in your work history. Through seamless integrations with suppliers, providers, and customers, you can also automate the prioritization of exception management. This enables you to proactively respond to network disruptions, improve on-time performance, and reduce costs for unplanned expedited shipping services.

“The biggest benefit for us was the automating of our complex requirements. Knowing with confidence that our outbound shipments were meeting specified cold ship requirements was a huge relief in our day-to-day operations.”
