Infios warehouse management solutions

If your business is growing, you operate one or more warehouses, and you're considering the best fit warehouse software, you may be thinking about:

- Supporting growing sales without increasing staff or space
- Availability and limitations of warehouse space
- Increasing supply and demand fluctuations
- The choice between paper-based systems, barcoding and best-of-breed warehouse software
- Whether to deploy in the cloud or on-premises

You may also be part of an omnichannel distribution strategy, and considering how to:

- Increase order accuracy and inventory visibility
- Integrate shipping, ASN printing, and EDI as part of the outbound order process
- Minimize inventory carrying costs, and conduct cycle counts quickly and accurately
- Decrease warehouse labor costs, potential chargebacks, and penalties from retailers
- Utilize one of many available pick methods

Our warehouse management system (WMS) solution was built by supply chain experts to provide the out-of-the box tools and extensibility to tackle even the most difficult tasks in the warehouse.

Key benefits of our WMS

- Customize your WMS through an advanced workflow engine without writing code
- Gain a more automated and customizable user experience
- Tailor the user interface for unique roles, leveraging system-generated alerts and emails
- Simple cloud-delivered training videos, label-printing, software updates, and content enhancements
- Facilitate reporting through a series of subject workcenters
- Conduct research into your customers, vendors, product and ERP integrations

Enterprise scalability

Designed for small to mid-sized businesses, you don't need an army of IT staff to support your WMS. You can start with the functionality you need now, at a price that makes sense, and scale for growth over time. Our seamlessly integrated modules and applications are available to you as and when you need them.

Breadth, depth and reach

Built on a web-centric platform, the solution contains standard best-of-breed warehouse management features: a dynamic directed put-away, several barcode supported picking styles, container building, cartonization, repackaging, voice, and RFID, to name a few.

Ability to adapt the user experience

Our powerful configuration tools allow the user interface, reports and workflow to be easily adapted to the specific vernacular, look and feel that suits you best.

Advanced event engine

An advanced event engine delivers real-time updates to your associates empowering them to act upon high priority customer orders, purchase order receipts and billing events based upon user-defined criteria and workflows. Events may be communicated via emails, text messages, database updates or custom actions.

Extensible performance reporting

Our WMS contains a powerful performance reporting application, which enables user-definable reporting extensions.

Enhanced supply chain intelligence

You gain powerful access to key performance indicators (KPIs). Advanced pivot capabilities provide virtually limitless ways to slice and dice information. The tablet app mobilizes information wherever it is needed, to illuminate trends and highlight outliers for effective decision making.

Mobility

Our tablet app allows inspection and reporting on the go.

Extensible UDF framework

As a component of our "Zero Modification" initiative, you can seamlessly add new information to the tables.

Functional enhancements

- Improved delivery and load-building
- Enhanced container management
- Extensions to the directed move manager
- Scheduled task management system
- Improved advance replenishment functionality

Enhanced integration

- Dynamic quality inspection
- Document imaging
- Multi-carrier shipping
- Configurable appointment scheduling
- Activity billing
- Integrated ASN manager
- Label print manager

A modular solution suite to fit your ERP

Our solution fully integrates with popular enterprise resource planning (ERP) systems from Microsoft, Sage, SAP, NetSuite, Infor and more. You can add modules as your business needs dictate.

Dynamic quality inspection

You can design tailored quality inspections for both inbound and outbound processes with custom questionnaires, focused pass/fail criteria, and conditional activities. Mobile users can leverage the intuitive tablet app—not only to execute inspections, but record pictures of the condition of the material, trailer or container.

Integrated document imaging with OCR support

Through our integrated document imaging system, you can capture and automatically retain searchable documents and images relevant to supply chain operations, such as signed bills of lading. Optical character recognition (OCR) allows you to create “form templates”, through which you can collect key information from hard copies, then link it to the information stored in the WMS—for example, a load or order number.

Powerful multi-carrier shipping

While some see shipping as a disconnected process outside the WMS, we view it as an integrated step in the pick/pack/ship handheld workflow. In this way, you save time and simplify your warehouse processes. The latest version of our multi-carrier shipping solution streamlines not only the “inline” shipping functionality, but also the exception shipping from our shipping station.

Configurable appointment scheduling

You can manage a discrete number of appointments by time slot without predetermining an actual door assignment. This helps you to determine the labor required and assign the available door when the inbound or outbound carrier arrives. You can also form KPIs that assist in both planning and negotiating arrangements with key carriers.

Integrated ASN manager

Through our ASN (advanced ship notice) Manager, the people responsible for electronic data exchange within your business have full visibility, access, and edit capability to ensure the ASN payload that is sent out is accurate and compliant with the requirements of the trading partner. The system also provides the ability to print GS1 labels (unique identifiers), bills of lading, and commercial invoices.

Cloud-ready label print manager

More and more, customers are opting to use the cloud for their computing environment—whether a private cloud, or one of our on-demand cloud solutions. Our cloud-based Print Manager provides a secure, high-performance means of printing documents such as barcode compliance labels on-premises, via the internet without using a VPN.

Ruggedized handheld design tools

The WMS Design Toolkit gives handheld WMS users the same degree of configurability as desktop users. Built on top of our Workflow engine, the Design Toolkit provides a graphical design surface to reconfigure both the workflow (business logic) of a handheld function and the user experience itself.

Cloud e-learning

Our cloud content delivery network is hosted and syndicated throughout the world for the fast, efficient, streamed delivery of “help” videos and multi-lesson classes. Our e-learning application provides powerful information designed to make your users more knowledgeable and self-sufficient.

Flexible deployment options

Our WMS is available on-premises or cloud-delivered in a software-as-a-service (SaaS) model.

WHY INFIOS?

In almost every industry, buyers are becoming more demanding. For logistics professionals, effectively meeting buyer needs has become a relentless quest for speed and agility. Traditional supply chain solutions are often siloed, complex and hard to implement. This will no longer suffice, as competitors find ways to deliver goods faster and more profitably.

In this “now” economy, Infios helps you stay agile, with adaptable, connected solutions that harness the power of your trading partner community. From the warehouse to the storefront—the desktop to the driver’s cab—we help you achieve new levels of supply chain responsiveness, performance, and profitability.

Our suite of warehouse management, business integration, transportation management, and retail/direct store delivery solutions form a complete, powerful, and adaptable platform that allows you to drive growth, customer satisfaction, and revenue.
